PREDGOVOR

Ob 50-letnici Registra raka za Slovenijo

Register raka za Republiko Slovenijo praznuje 50 let. Malo je držav v razvitem svetu, ki se lahko pohvalijo s takšno dolgoletno tradicijo. Register je bil ustanovljen pri Onkološkem inštitutu (OI) v Ljubljani leta 1950. Slovenija je tako ena redkih dežel na svetu, v kateri že petdeset let spremljamo zbolewnost za rakom. Vztrajnost in vizijo vseh, ki so to delo načrtovali in vodili, lahko le občudujemo.

Delo Registra raka je v 50 letih bogato obrodilo. Redna letna poročila, posebne publikacije in članki nam omogočajo spremljanje in načrtovanje onkološkega zdravstvenega varstva.

Ustanoviteljem Registra, vsem nekdanjim in sedanjim sodelavcem ob visokem jubileju iskreno čestitam in se jim zahvaljujem za predano in uspešno delo.

PREFACE

On the Fiftieth Anniversary of Cancer Registry of Slovenia

Cancer Registry of Slovenia is celebrating its golden jubilee. Only a few countries in the developed world can take pride in such a long-lasting tradition. The Registry was established in 1950, at the Institute of Oncology in Ljubljana (IO). Hence, Slovenia is one of the few countries where data on cancer incidence have been collected for the last 50 years. We highly esteem the eagerness and farsightedness of all the enthusiasts who were designing, implementing and who are still carrying on with this project.

The 50-year endeavors have been most rewarding. Regular annual reports, special publications and articles immensely help us in pursuing as well as outlining health care in oncology.

I would like to take this opportunity to express my gratitude to the founders of the Registry, to our colleagues who used to work at the Registry and those who are working there at present for their assiduous efforts and successful work, and to congratulate them on this important jubilee.

Zvonimir Rudolf,
direktor Onkološkega Inštituta Ljubljana
director of Institute of Oncology Ljubljana

Slike / Figures

1 Breme raka – Slovenija 1997 Cancer burden – Slovenia 1997	14
2 Stabilnost podatkov – število in odstotek novih primerov raka, prijavljenih po izdaji letnega poročila, po obdobju Data stability – number and percentage of new cases reported after the publication of annual reports, by time period	14
3 Najpogostejše rakave bolezni po spolu – Slovenija 1950–97 The leading cancer sites by sex – Slovenia 1950–97	15
4 Groba in kumulativna letna incidenca vseh rakov po spolu – Slovenija 1950–97 Crude and cumulative annual cancer incidence; all sites by sex – Slovenia 1950–97	16
5 Groba letna incidenca izbranih rakov po spolu – Slovenija 1950–97 Crude annual cancer incidence by selected primary sites and sex – Slovenia 1950–97	17
6–15 Zemljevidi grobe in kumulativne incidenčne stopnje – Slovenija 1987–96, ter relativno petletno preživetje bolnikov po stadiju – Slovenija 1963–93 Maps of crude and cumulative cancer incidence rates – Slovenia 1987–1996, and relative five-year patients' survival by stage – Slovenia 1963–93	
6 Pljučni rak pri moških Lung cancer in males	18
7 Pljučni rak pri ženskah Lung cancer in females	19
8 Rak dojke pri ženskah Breast cancer in females	20
9 Rak materničnega vratu Cervical cancer	21
10 Rak ustne votline in žrela pri moških Oral cavity and pharyngeal cancer in males	22
11 Rak grla pri moških Laryngeal cancer in males	23
12 Rak debelega črevesa pri moških Colon cancer in males	24
13 Rak debelega črevesa pri ženskah Colon cancer in females	25
14 Rak danke pri moških Rectal cancer in males	26
15 Rak danke pri ženskah Rectal cancer in females	27

Tabele / Tables

1	Prebivalstvo Slovenije po starosti in spolu na dan 30. junija 1997 Population of Slovenia by age and sex on June 30th, 1997	28
2	Prebivalstvo Slovenije po zdravstvenih regijah po spolu na dan 30. junija 1997 Population of Slovenia by health regions by sex on June 30th, 1997	29
3	Število novih primerov raka ter število in odstotek primerov, registriranih samo iz zdravniških poročil o vzroku smrti, po lokaciji in spolu – Slovenija 1997 Total number of new cancer cases, number and percentage of cases registered from death certificates only, by site and sex – Slovenia 1997	30
4a	Število novih primerov raka po lokaciji (MKB-10), spolu in starosti – Slovenija 1997 Number of new cancer cases by primary site (ICD-10), sex, and age – Slovenia 1997	36
4b	Število novih primerov raka po lokaciji (MKB-8), spolu in starosti – Slovenija 1997 Number of new cancer cases by primary site (ICD-8), sex, and age – Slovenia 1997	40
5	Incidenca raka na 100.000 prebivalcev po spolu in starosti ter kumulativna stopnja po lokaciji – Slovenija 1997 Cancer incidence per 100.000 population by sex and age, and cumulative rate by site – Slovenia 1997	43
6	Število novih primerov raka po zdravstvenih regijah, po najpogostejših lokacijah in spolu – Slovenija 1997 Number of new cancer cases by health regions, by most frequent sites and sex – Slovenia 1997	50
7	Število novih primerov raka, ugotovljenih v bolnišnicah, ter število in odstotek mikroskopsko potrjenih primerov, po lokaciji in spolu – Slovenija 1997 Total number of new cancer cases diagnosed in hospitals and number and percentage of microscopically confirmed cases – by site and sex – Slovenia 1997	51
8	Število histološko (in citološko) potrjenih novih primerov raka – po histološki vrsti in lokaciji – Slovenija 1997 Number of histologically (and cytologically) confirmed new cancer cases by histologic type and site – Slovenia 1997	57
9	Število primerov ne-Hodgkinovih limfomov po lokaciji, spolu in starosti – Slovenija 1997 Total number of non-Hodgkin's malignant lymphomas by site, sex, and age – Slovenia 1997	66
10	Število novih primerov raka po bolnišnicah ugotovitve diagnoze ter število in odstotek primerov, napotenih na Onkološki inštitut, – Slovenija 1997 Number of new cancer cases diagnosed by reporting hospitals, and number and percentage of cases referred to the Institute of Oncology, Ljubljana – Slovenia 1997	67
11	Število in odstotek novih primerov raka, ugotovljenih v bolnišnicah, po stadiju, lokaciji in spolu – Slovenija 1997 Number and percentage of new cancer cases reported by hospitals by stage, site and sex – Slovenia 1997	69
12	Število umrlih za rakom in drugimi neoplazmami po lokaciji, spolu in starosti – Slovenija 1997 Number of cancer and other neoplasms deaths by site, sex and age – Slovenia 1997	73
13	Število vseh živih bolnikov z rakom po spolu in izbrani primarni lokaciji – Slovenija, 31. december 1997 Prevalence of cancer patients by sex and selected primary site – Slovenia, Dec. 31, 1997	77

UVOD

Register raka za Republiko Slovenijo (Register) je bil ustanovljen pri Onkološkem inštitutu v Ljubljani leta 1950 na pobudo in pod vodstvom profesorice dr. Božene Ravnihar kot posebna služba za zbiranje in obdelavo podatkov o incidenci raka in o preživetju bolnikov z rakom. Prijavljanje raka je od takrat dalje v Republiki Sloveniji obvezno, z zakonom predpisano (**Ur. l. SRS**, št. 10/50, št. 29/50, št. 14/65, št. 1/80, št. 45/82, št. 42/85 in **Ur. l. RS**, št. 9/92). Podrobneje ga zaenkrat še vedno določa **Pravilnik o prijavi in kontroli rakavih bolnikov in o drugih tehničnih vprašanjih boja proti raku** (**Ur. l. SRS**, št. 4/66).

Incidenca raka je po svetu zelo različna. Tudi Republika Slovenija kaže v zboleznosti za rakom svojo posebno sliko. Zbrani podatki so številčna podlaga za ocenjevanje družbenega bremena rakavih bolezni v republiki, načrtovanje in ocenjevanje onkološkega varstva na področju primarne preventive, detekcije, diagnostike, zdravljenja, rehabilitacije, načrtovanje zmogljivosti in sredstev zdravstvenega varstva, ki so potrebni za obvladovanje rakavih bolezni (kadri, medicinska oprema, posteljne zmogljivosti), ter za klinične in epidemiološke raziskave v Sloveniji in v sklopu širših mednarodnih raziskav.

Populacijski register raka opravičuje svoj obstoj le, če se zbrani podatki tudi redno obdelujejo in objavljajo. Ena izmed stalnih oblik vračanja obdelanih informacij so prav letna poročila. Ker je virov informacij več, leta povsod po svetu izhajajo z vsaj dveletnim zamikom.

Register je prva letna poročila izdajal že v letih 1953–57 za leta 1951–55. Prva analiza podatkov za leto 1950 je bila objavljena v **Zdravstvenem vestniku** leta 1951 (Vol. 20, 264–277). Podatki za leta 1957–71 so bili objavljani v periodičnih publikacijah Svetovne zdravstvene organizacije **Epidemiological and Vital Statistics Report** Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967) in v **World Health Statistics Report** (Vol. 23, No. 3, 1970; Vol. 24, No. 2, 1971; Vol. 25, Nos. 4, 5, 1972; Vol. 26, No. 8, 1973; Vol. 27, Nos. 6, 7, 1974). Podatki od leta 1965 dalje so bili spet redno objavljeni v posebnih letnih poročilih z naslovom **Rak v Sloveniji** (1965–77) oziroma **Inc-**

INTRODUCTION

The Cancer Registry of Slovenia (Registry) was founded in 1950 at the Institute of Oncology in Ljubljana, on the initiative and under the leadership of Professor Božena Ravnihar, as a special service for collecting and processing data on cancer incidence and cancer patients' survival. Since then, notification of cancer has been compulsory in Slovenia (**Official Gazette of SRS**, No. 10/50, No. 29/50, No. 14/65, No. 1/80, No. 45/82, No. 42/85, and **Official Gazette of RS**, No. 9/92). Detailed definition on this is given in the **Regulations on notification and follow-up of cancer patients and other technical aspects of anticancer activities** (**Official Gazette of SRS**, No. 4/66).

Cancer incidence in the world varies greatly. The Republic of Slovenia has a specific pattern of cancer incidence. The collected data serve as a basis for the assessment of cancer burden, for programming and evaluation of primary prevention, detection, diagnosis, treatment, rehabilitation, for planning facilities and funding needed for cancer control, hospital capacities and equipment, as well as for clinical and epidemiological research in Slovenia and in different multicentric international projects.

The existence of a population-based cancer registry is justified only by regular processing and publication of the collected data. The Registry's Annual Reports represent a permanent form of feedback information. Because of a variety of data sources and contributors, almost all cancer registries practise at least a two-year delay in data publishing.

The first data analysis for the year 1950 was published in **Zdravstveni vestnik** in 1951. The first annual reports of the Registry for the period 1951–55 were issued during the years 1953–57. The data for the period 1957–71 were appearing in the periodicals edited by World Health Organization – **Epidemiological and Vital Statistics Report**, Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967), as well as in **World Health Statistics Report** (Vol. 23, No. 3, 1970; Vol. 24, No. 2, 1971; Vol. 25, Nos. 4, 5, 1972; Vol. 26, No. 8, 1973; Vol. 27, Nos. 6, 7, 1974). The data from 1965 onwards started

denca raka v Sloveniji (1978–96) v slovenskem in angleškem jeziku. Glede na želje in pripombe uporabnikov poizkušamo ta letna poročila iz leta v leto dopolnjevati. V uredniškem odboru smo zbrani specialisti različnih vej onkologije (kliniki, epidemiologi in patolog).

Naš Register je ena prvih tovrstnih služb v Evropi. Pred letom 1950 so bili populacijski registri raka ustanovljeni le v Hamburgu, na Danskem, v Veliki Britaniji, v Belgiji in v tedanji ZSSR. Prav zato so in so bili naši podatki o incidenci raka zanimivi tudi za svet. Leta 1957 je izšlo prvo obsežnejše poročilo za leta 1950–55 v angleščini **Cancer in Slovenia 1955** (B. Ravnihar, A. Valentin, T. Božič, J. Doič, D. Pečirer). Podatke za leta 1956–60, 1961–65, 1968–72, 1973–76, 1978–81, 1982–87 in 1988–92 so objavili tudi v vseh sedmih zvezkih knjige **Cancer Incidence in Five Continents**, UICC, Ženeva (Vol. 1, 1966, eds. Doll R., Payne P., Waterhouse J.; Vol. 2, 1970, eds. Doll R., Muir C., Waterhouse J.), in IARC, Lyon (Vol. 3, 1976, eds. Waterhouse J., Muir C., Correa C., Powell J.; Vol. 4, 1982, eds. Waterhouse J., Muir C., Shanmugaratnam K., Powell J.; Vol. 5, 1987, eds. Muir C., Waterhouse J., Mack T., Powell J., Whelan S.; Vol. 6, 1992, eds. Parkin DM., Muir C., Whelan S., Gao Y., Ferlay J., Powell J.; Vol. 7, 1997, eds. Parkin DM., Whelan S., Ferlay J., Raymond L., Young J.). Podatki o incidenci in umrljivosti za rakom za leta 1983–94 so vključeni tudi v podatkovno bazo **Mreže evropskih registrov raka EUROCIM**, ki jo vzdržujeta Evropska komisija programa Evropa proti raku in Mednarodna agencija za raziskovanje raka.

V letu 1993 smo računalniško obdelavo podatkov podprli s programom Oracle na lastnem strežniku Unix, Silicon Graphics IRIS4D/310S. V letu 1999 smo to programsko in strojno opremo posodobili.

Zbrane podatke stalno obdelujemo in pojasnujemo v skladu s trenutno perečo problematiko v Sloveniji, našim raziskovalnim programom in željami uporabnikov. Članki so objavljeni v domačem in tujem strokovnem tisku ter po potrebi tudi v dnevnikih časopisih. Izdali smo še dve knjigi: leta 1992 **Zemljevide incidence raka v Sloveniji, 1978–1987** in leta 1995 **Preživetje bolnikov z rakom v Sloveniji 1963–1990** s komentarji klinikov-onkologov v slovenskem in angleškem jeziku. V letošnjem jubilejnem poročilu objavljamo

to reappear regularly in special bi-lingual (Slovene-English) annual reports, first entitled **Cancer in Slovenia** (1965–77), and then **Cancer Incidence in Slovenia** (1978–96).

Our endeavors have always been directed towards further improvement of these publications, taking into account the requests and comments of the users. The editorial board consists of experts of different specialties in oncology (i. e. clinicians, epidemiologists and a pathologist).

Our Registry is one of the oldest services of this type in Europe. Before 1950, population-based cancer registries existed only in Hamburg (Germany), Denmark, Great Britain, Belgium and in the former Soviet Union. Therefore, our data on cancer incidence are interesting for a wide circle of professionals abroad. In 1957, the first comprehensive report in English for the period 1950–55 entitled **Cancer in Slovenia 1955** was issued (B. Ravnihar, A. Valentin, T. Božič, J. Doič, D. Pečirer). The data for the periods 1956–60, 1961–65, 1968–72, 1973–76, 1978–81, 1982–87 and 1988–92 were published in all seven volumes of the publication **Cancer Incidence in Five Continents** issued by UICC, Geneva (Vol. 1, 1966, eds. Doll R., Payne P., Waterhouse J.; Vol. 2, 1970, eds. Doll R., Muir C., Waterhouse J.), and IARC, Lyon (Vol. 3, 1976, eds. Waterhouse J., Muir C., Correa C., Powell J.; Vol. 4, 1982, eds. Waterhouse J., Muir C., Shanmugaratnam K., Powell J.; Vol. 5, 1987, eds. Muir C., Waterhouse J., Mack T., Powell J., Whelan S.; Vol. 6, 1992, eds. Parkin D. M., Muir C., Whelan S., Gao Y., Ferlay J., Powell J.; Vol. 7, 1997, eds. Parkin D. M., Whelan S., Ferlay J., Raymond L., Young J.). The data on cancer incidence and mortality for the years 1983–94 were also included in EUROCIM, the data base of the **Network of European Cancer Registries**, maintained by the European Commission of Europe Against Cancer program, and IARC (International Agency for Research on Cancer).

Since 1993, computer data analyses have been performed with the Oracle relational data base support on our own Unix – Silicon Graphics IRIS4D/310S server. In 1999, the hardware and software were upgraded.

The collected data have been processed in accordance with the current problems in Slovenia, as well as with respect to our research program and individual needs of our

zemljevide incidence in preživetje bolnikov za novejša obdobja.

Izsledki študije **Napoved incidence raka v Sloveniji do leta 2009** so v poljudni obliki objavljeni v časopisu **Onkologija** (1998; 2 (2)), strokovni članek z opisom metod pa je v tisku v reviji **Cancer Causes and Control**.

users. These data are published in the national and foreign medical literature and in the daily print, when necessary. In 1992, a special publication covering a ten-year period, **Atlas of Cancer Incidence in Slovenia, 1978–1987**, and in 1995, a book entitled **Cancer Patients' Survival in Slovenia, 1963–1990** with comments in Slovene and English by clinicians, specialized in oncology, were published. With this year's report, the Registry is celebrating its golden jubilee; the maps of cancer incidence and survival published in this issue cover the most recent period.

The results of the study **Prediction of Cancer Incidence in Slovenia till 2009** were published in Slovene in **Onkologija** (1998; 2 (2)), and in English in **Cancer Causes and Control** (accepted in 1999).

GRADIVO

Osnovni vir podatkov so Prijavnice raka-ve bolezni. Registru jih pošiljajo iz vseh bolnišnic in diagnostičnih centrov v Sloveniji, v izjemnih primerih tudi iz zdravstvenih centrov osnovnega zdravstvenega varstva. Te podatke dopolnjujemo z zdravniškimi poročili o vzroku smrti in z obdukcijskimi zapisniki, v katerih je navedena diagnoza rak. Zbiranje podatkov za pričujoče letno poročilo smo zaključili 6. decembra 1999.

Zanesljivost podatkov osvetljujejo dva kazalca: odstotek primerov raka, registriranih samo iz zdravniških poročil o vzroku smrti (tabela 3), in odstotek mikroskopsko (histološko ali citološko) potrjenih primerov (tabela 7). Popolnost zajetja se zrcali v stabilnosti podatkov po izdaji letnega poročila (slika 2).

V letu 1993 smo uvedli obvezno prijavljanje vseh sprememb materničnega vratu, označenih kot CIN III. V tabelah 3–7 tako letos že petič navajamo število vseh primerov, prijavljenih kot CIN III. Mednje so šteti tudi tisti, ki so bili označeni kot intraepitelijski in so bili v preteklih letih navedeni v teh tabelah pod šifro 2340. Število vseh primerov CIN III je približno trikrat večje od števila primerov, prijavljenih kot intraepitelijski karcinom. Primerjava s podatki za obdobje 1961–92 tako ni možna. Na željo klinikov smo dodali še število vseh

MATERIAL

The main sources of data are notifications gathered from all hospitals and diagnostic centers in Slovenia. This information is completed by death certificates and autopsy protocols stating cancer diagnosis, and by notifications from regional health centres. The collection of data for the current report was completed on 6 December 1999.

The reliability of information can be assessed by two parameters: 1) the percentage of cancer cases registered solely on the basis of death certificates (Table 3), and 2) by the percentage of microscopically (histologically or cytologically) confirmed cases (Table 7). The completeness of registration is reflected in the data stability (Figure 2).

In 1993, compulsory registration of all cervical intraepithelial displasias classified as CIN III was introduced. Thus, in the present report for the fifth time the number of all CIN III cases reported is given in Tables 3–7. CIN III include also the types classified as intraepithelial cancers, previously listed in these tables under the code 2340. The number of all CIN III cases is threefold that of the cases reported as intraepithelial carcinomas. Therefore, any comparison with the data for the period 1961–92 is not possible. Since 1995,

prijavljenih intraepitelijskih karcinomov mehurja in vseh malignih melanomov Clark I.

Lokacije raka so v tabelah navedene po 10. reviziji Mednarodne klasifikacije bolezni (MKB). Tako kot v prejšnjih poročilih pa so v tabeli 4 podatki navedeni tudi po 8. reviziji (tabela 4b) z namenom, da bi bralca opozorili na razlike med obema revizijama in da bi mu omogočili primerjavo s podatki preteklih poročil. Vsoti tabel 4a in 4b nista enaki, ker po 10. reviziji MKB policitemija rubra vera in mielofibroza nista več uvrščeni med rakave bolezni.

DEFINICIJE

Incidenca pomeni število vseh v enem koledarskem letu na novo ugotovljenih primerov raka v točno določeni populaciji. V incidenco ne štejemo novih primarnih rakov parnega organa iste lokacije, če je bila histološka vrsta obeh rakov, npr. leve in desne dojke, enaka. Prav tako v incidenco ne štejemo novega pojava raka iste histološke vrste na istem organu, npr. multiple lezije v debelem črevesu. V incidenco pričujočega poročila so vključeni primeri bolezni bolnikov s stalnim bivališčem na območju Republike Slovenije, ne glede na to, kje so bili ti bolniki zdravljeni.

Groba incidenčna stopnja je število novih primerov na 100.000 oseb opazovane populacije, starostno specifična stopnja pove to relativno število v posamezni petletni starostni skupini.

Kumulativna stopnja je petkratna vsota starostno specifičnih incidenc na 100 prebivalcev posameznih petletnih starostnih skupin do 74. leta starosti. Day jo opredeljuje kot direktno, na dejansko populacijo posamezne petletne starostne skupine standardizirano incidenco ali kot približek kumulativnemu tveganju. Kumulativno tveganje je verjetnost posameznika, da bi zbolel v določenem starostnem obdobju, npr. do 74. leta starosti za rakom, če ne bi bilo še drugih vzrokov smrti. Kumulativno stopnjo računamo na sto in jo izražamo v odstotkih (Cancer Incidence in Five Continents, Vol. 6, 1992: 862–3). Kumulativna stopnja 6,4/100 za raka dojke pri ženskah

the number of all reported intraepithelial carcinomas of the bladder and all malignant melanomas Clark I has been added on clinicians' request.

Cancer sites were coded according to the 10th revision of the International Classification of Disease (ICD). As in earlier reports, Table 4 contains also the data coded according to the 8th revision (Table 4b) in order to render the comparison with the reports from 1970 on feasible. The totals in Tables 4a and 4b are not equal because, after the 10th revision of ICD, polycythemia rubra vera and myelofibrosis ceased to be classified as malignant neoplasms.

DEFINITIONS

Incidence is the number of newly diagnosed cancer cases in a defined population, reported to the Registry for a given calendar year. So, the current report includes only the data on patients with permanent residence in Slovenia, regardless of the place of treatment. New primary cancers of the same histology in paired organs, e. g. on the left and right breast, are not comprised in the incidence figures, neither are any new cancers of the same histology appearing in the same organ, e. g. multiple lesions of the colon.

Crude incidence rate is the number of new cases per 100.000 population, while the age specific rate expresses this relative number in an individual five-year age group.

The cumulative incidence rate is five times the sum of the age-specific incidence rates calculated over five-year age groups. Day interprets it as a directly age-standardized rate with the same population size in each age-group, or as an approximation to the cumulative risk. The cumulative risk is the risk an individual would have of developing the disease in question during a certain age period if no other causes of death were in operation. The cumulative rate is expressed per hundred (per cent) (Cancer Incidence in Five Continents, Vol. 6, 1992: 862–3). Thus, the cumulative rate (0–74) of 6.4/100 for breast cancer in females means that 6.4% of females are expected to develop breast cancer till their 75th year of age.

pomeni npr., da bo 6,4% žensk do 75. leta starosti verjetno zbolelo za rakom dojke.

Kumulativna stopnja incidence je pomembna za primerjanje incidence v daljšem časovnem obdobju, ko se je starostna struktura opazovane populacije spreminjala, in za primerjanje incidence med populacijami z različno starostno strukturo. Primerjava oblike krivulj na sliki 4 nam tako kaže, da naraščanje incidence raka ne moremo pripisati le staranju prebivalstva RS, ampak da k temu prispevajo še drugi dejavniki tveganja.

Relativni odstotek preživetja je količnik med opazovanim in pričakovanim odstotkom preživetja. Primeren je za opazovanje preživetja različnih starostnih skupin bolnikov in za primerjavo v daljšem časovnem obdobju, ko se je starostna struktura iste populacije spreminjala. Opazovani odstotek preživetja upošteva vse smrti ne glede na vzrok smrti in je odsev dejanske umrljivosti v opazovani skupini bolnikov. Pričakovani odstotek preživetja pa pove, kako dolgo bi opazovani bolniki živeli, če ne bi zboleli za rakom. Izračunamo ga s pomočjo tablic umrljivosti in dejanske starostne strukture opazovanih bolnikov.

The cumulative rate is important for comparing the incidence within longer time periods with changing age structure of the population observed, and for comparing cancer incidence in populations with a different age structure. The comparison of the curves of crude incidence per 100,000 population and cumulative incidence rates in Figure 4 indicates that the increasing cancer incidence rate in both sexes cannot be attributed only to the aging of population, but also to additional risk factors.

Relative survival rate is a ratio of the observed and expected survival rate. It is most useful in making comparisons of the survival of different age groups of cancer patients and within longer time periods throughout which the age structure of the same population is changing. The observed survival rate comprises all death cases, regardless the cause of death, and reflects the actual mortality rate in the observed group of cancer patients. The expected survival rate indicates how long the observed group of cancer patients would have lived, had they not been affected by cancer. It is calculated from life tables for Slovenia and the actual age structure of the observed group of patients.

POJASNILA

Slike 1–5 prikazujejo tiste podatke, ki naše uporabnike največkrat zanimajo: število vseh zbolelih in umrlih za rakom v letu 1997, najpogostnejše rakave bolezni po spolu, trende incidence vseh in izbranih rakov po spolu.

Slike 6–15 so nastale ob 50-letnici Registra raka za Slovenijo. Za izbrane rake (pljučni rak, rak debelega črevesa in danke, dojke, materničnega vratu, ustne votline, žrela in grla) kažejo zemljevide incidence za obdobje 1987–1996 in relativno petletno preživetje bolnikov, zbolelih v letih 1963–1993 po stadiju in obdobju diagnoze.

Tabele prikazujejo podatke o prebivalcih in incidenci raka v Sloveniji v letu 1997 po spolu, starosti, lokaciji, histološki vrsti in stadiju bolezni ob diagnozi, o incidenci po zdravstvenih regijah ter podatke o številu novih primerov raka, ugotovljenih v tem letu po posameznih bolnišnicah.

COMMENTS

Figures 1–5 present the data our readers are most frequently interested in: the number of new, deceased and prevalent cancer patients in 1997, the most frequent cancer sites by sex, and the incidence trends for all and selected sites by sex.

Figures 6–15 show, for selected cancer sites, maps on cancer incidence for the period of 1987–1996 and data on five-year relative survival of patients by stages and years of diagnoses for the period of 1963–1993.

Tables show data on population and on cancer incidence in Slovenia in 1997 by sex, age, site, histology, stage of the disease at diagnosis, on the incidence in the individual health center districts and the data on new cancer cases diagnosed in the current year in different hospitals in Slovenia.

The reliability of the data for 1997 is reflected in 3% of cases registered only on the basis

Trije odstotki primerov, registriranih samo s pomočjo zdravniških poročil o vzroku smrti (tabela 3), so približno realen delež rakavih bolnikov, ki v Sloveniji zaradi starosti ali napredovale bolezni ni bil preiskovan in zdravljen v bolnišnici. Verjetno pa bi bil ta delež tako registriranih bolnikov ob boljšem sodelovanju s centri osnovnega zdravstva lahko še za odstotek manjši.

Število zbolelih otrok je v mejah pričakovanega (tabeli 4a in 4b). V tabeli 4b so lokacije raka šifrirane tudi po 8. reviziji MKB, da je primerjava s poročili od vključno 1970. leta dalje še možna.

Tabela 5 prikazuje grobo in starostno specifično incidenčno stopnjo na 100.000 prebivalcev ter kumulativno stopnjo na 100. Število vseh novih primerov raka iz leta 1997 je preračunano na število prebivalcev R Slovenije na dan 30. junija tega leta (tabela 1).

Na različno starostno strukturo območij zdravstvenih regij moramo pomisliti tudi pri uporabi in razlagi podatkov tabele 6. Njen namen je prikazati število novozbolelih za operativne namene načrtovanja zmogljivosti in sredstev zdravstvenega varstva na območjih zdravstvenih regij. Tako v tej tabeli prikazujemo tudi podatke o številu novih primerov CIN III. Za druge namene, predvsem za iskanje vzrokov takšnega ali drugačnega pojavljanja raka, je treba podatke najprej starostno standardizirati. Kako vpliva različna starostna struktura na incidenčne stopnje, je razvidno iz zemljevidov na slikah (slike 6–15), ki prikazujejo tako grobe kot kumulativne incidenčne stopnje po območjih bivših občin, sedanjih upravnih enot RS.

Število vseh mikroskopsko, to je histološko ali citološko, potrjenih novih primerov raka je navedeno v tabelah 7 in 8. V tabeli 8 so ločeno navedeni primeri, ki so histološko potrjeni, in tisti, ki so potrjeni samo citološko (ti primeri so navedeni v osenčenih stolpcih). Vsota vseh je enaka številu vseh mikroskopsko potrjenih primerov, navedenemu v tabeli 7. Histološke vrste v tabeli 8 so šifrirane po 2. reviziji šifranta ICD-O (WHO, 1991). Združili smo jih v smiselne skupine za namene tega poročila. To pa ne izključuje individualne obdelave po katerikoli šifri navedenega šifranta ICD-O, npr. izpisa redkih histoloških vrst, kot je Burkittov limfom.

Starostno porazdelitev ekstranodalnih in nodalnih lokacij ne-Hodgkinovih malignih

of death certificates (Table 3). This percentage approximates the actual rate of cancer patients in Slovenia who failed to be diagnosed or treated at hospital due to their old age and/or advanced disease. However, it could have been lower for a percent or so, had we achieved a better cooperation among health centers.

The number of childhood cancers has been within the limits of values expected (Tables 4a and b). In Table 4b cancer sites are coded also according to the 8th revision in order to facilitate the comparison with the reports for the years from 1970 onwards.

Crude and age-specific incidence per 100.000 population is presented in Table 5 together with cumulative rate per 100. The number of all new cancer cases registered in 1997 was calculated per Slovenian population census on 30 June, 1997 (Table 1).

When using and interpreting the data in Table 6, different age structure of the population in regional health centre districts should be taken into account. It is intended to present the number of newly diagnosed cancers, as needed for planning of facilities and resources of health care in the health care regions. Therefore, in this table, the data on all new CIN III cases by health centres are presented. When used for other purposes, particularly for the search of possible risk factors of different cancers, the data require previous age standardization. The influence of different age structures on the incidence rates is evident also from maps drawn in Figures 6–15 presenting crude as well as cumulative incidence rates for all and most frequent cancers by communes.

All microscopically, i. e. cytologically and histologically confirmed new cancer cases are presented in Tables 7 and 8. In Table 8, histologically verified cases are presented separately from those confirmed cytologically (the latter are given in shaded columns). The total amounts to the number of all microscopically confirmed cases in Table 7. Histological types in Table 8 are coded according to the 2nd revision of ICD-O (WHO, 1991). For the purpose of this report, they have been joined to form sensible groups. This, however, does not exclude individual processing by any ICD-O code, e. g. outprint of rare histologic types, such as Burkitt lymphoma.

limfomov kaže tabela 9. Zaradi majhnega števila ekstranodalnih lokacij prikazujemo le absolutna števila.

Klinike in bolnišnice prve prijave rakave bolezni so navedene v tabeli 10.

Poenostavljeno opredelitev stadijev ob ugotovitvi bolezni prikazuje tabela 11. Opredelitev stadijev solidnih tumorjev sicer praviloma sledi klasifikaciji TNM. Poenostavljena opredelitev stadijev upošteva vse preiskovalne metode, vključno operacijo; če bolnik ni bil predhodno zdravljen, pa tudi obdukcijo. V uporabi je zato, ker so podatki o stadiju bolezni po klasifikaciji TNM na prijavnica pogosto pomanjkljivi. Maligni limfomi so opredeljeni po klasifikaciji Ann-Arbor. Podobno kot za histološke vrste je možen tudi izpis podatkov po klasifikaciji TNM, v kolikor so bili podatki ustrezno šifrirani na prijavnica oziroma že v popisih bolezni.

Uradni podatki o umrljivosti za rakom so v tabeli 12. Tabelo je pripravila dr. Jožica Šelb - Šemrl z Inštituta za varovanje zdravja RS.

Podatki o prevalenci vseh in najpogostejših rakov so prikazani v tabeli 13.

Obe tabeli smo dodali na željo številnih uporabnikov že v poročilo za leto 1995.

ZAHVALA

Zahvaljujemo se vsem zdravnikom, medicinskim sestram in administrativnemu osebju, ki so nam vestno in redno pošiljali podatke o novozbolelih rakavih bolnikih in njihovi nadaljnji usodi, Inštitutu za varovanje zdravja RS ter Centralnemu Registru prebivalstva RS za dolgoletno sodelovanje. Prav posebej se zahvaljujemo sodelavkam Bolnišničnega registra Onkološkega inštituta v Ljubljani: Ani Dotzauer, Maruški Ferjančič in Nadi Jamšek, ki so z vodenjem evidence in s skrbnim izpisovanjem in šifriranjem podatkov iz računalniško vodenega bolnišničnega informacijskega sistema prispevale vsaj polovico v tem poročilu obdelanih podatkov.

Ljubljana, 3. 1. 2000

Age distribution of extranodal and nodal sites of non-Hodgkin malignant lymphomas is presented in Table 9. Owing to a small number of extranodal sites only the absolute numbers are given.

In Table 10 university and general hospitals of first admission of cancer patients are cited.

A simplified definition of stages at diagnosis is presented in Table 11. Otherwise, solid tumor stage is classified according to TNM Classification System. In the simplified stage determination all investigation methods, incl. surgery, are considered. In the case that the patient has not been treated previously, autopsy report is considered as well. Malignant lymphomas are classified according to Ann-Arbor System. Similarly as for the histologic type, outprint of data by TNM classification is possible as well, provided that the data were coded correctly in patient records as well as in notification forms.

Official data on cancer mortality are given in Table 12. The table has been prepared by Dr. Jožica Šelb - Šemrl from the Institute of Public Health of the Republic of Slovenia.

Data on prevalence of all and most frequent cancers are presented in Table 13.

Both tables were included already in the 1995 report on request of numerous users.

ACKNOWLEDGMENT

We thank the physicians, nurses and administrative staff who have provided the data on new cancer patients and their further history, as well as the Institute of Public Health of the Republic of Slovenia and the Population Registry of the Republic of Slovenia for their longstanding collaboration. We owe special thanks to the co-workers at the Hospital Registry of the Institute of Oncology: Mrs. Ana Dotzauer, Maruška Ferjančič, and Nada Jamšek, whose accurate evidence keeping, registration and coding of data from the computerized hospital information system have contributed at least a half of the information presented in this report.

Opis šifer

Description of the ICD numbers

C16	Želodec Stomach	C50	Dojka Breast
C18	Debelo črevo Colon	C53	Maternični vrat Cervix uteri
C19	Rektosigmoidna zveza Rectosigmoid junction	C54	Maternično telo Corpus uteri
C20	Rektum Rectum	C61	Prostata Prostate
C34	Sapnica in pljuča Bronchus and lung	D06	Maternični vrat, CIN III Cervix uteri, in situ
C44	Druge maligne neoplazme kože Skin, other malignomas		

* Neupoštevano v skupnem številu: D06 - Maternični vrat, CIN III
Not included in All sites: D06 - Cervix uteri, CIN III

Tabela 7. Število novih primerov raka, ugotovljenih v bolnišnicah, ter število in odstotek mikroskopsko potrjenih primerov, po lokaciji in spolu – Slovenija 1997**Table 7.** Total number of new cancer cases diagnosed in hospitals and number and percentage of microscopically confirmed cases, by site and sex - Slovenia 1997
